

Lab 6: MVC Web Form with EF (Database First)

Part 1: a) Create a LabDB database

```
create table students(  
    StudentID int IDENTITY(1,1) PRIMARY KEY,  
    FullName nvarchar(50),  
    BirthDate datetime,  
    Gender bit,  
    Email nvarchar(100)  
)  
insert into students values('Son Tung MTP','10-24-1992',1,'mtp@gmail.com')  
insert into students values('Dan Truong','11-04-1991',1,'dantruong@gmail.com')  
insert into students values('Cam Ly','07-13-1990',0,'camly@gmail.com')  
insert into students values('Pham Bang Bang','02-11-1993',0,'pbbang@gmail.com')  
insert a row with your own student info (your student name,...)
```

Part 1 : b) Use C# Windows Form to create a Window Form: (use App.config for connectionString)

Double click on form to open form_Load event, change name of dataGrid control: gridStudents.

```
private void Form1_Load(object sender, EventArgs e) {  
    SqlConnection conn = new SqlConnection();  
    //con.ConnectionString = @"Data Source=DELL-L5480-LT\SQL2017;Initial Catalog=DB_Test;Persist Security Info=True;User  
ID=sa;Password=SQL2017";  
    conn.ConnectionString = @"Data Source=DELL-L5480-LT\SQL2017;Initial Catalog=DB_Test;Integrated Security = True;";  
    conn.Open();  
    SqlCommand cmd = new SqlCommand("select * from student", conn);  
    SqlDataAdapter da = new SqlDataAdapter(cmd);  
    DataTable dt = new DataTable();  
    da.Fill(dt);  
    if (dt.Rows.Count > 0){  
        gridStudents.DataSource = dt;  
    }  
    else {  
        MessageBox.Show("No Data");  
    }  
    conn.Close();  
}
```

Winform Homework (Refer to Part 1b , Student project template), make Create/Edit/Delete for 3 tables (Department, Dependence, Employee)

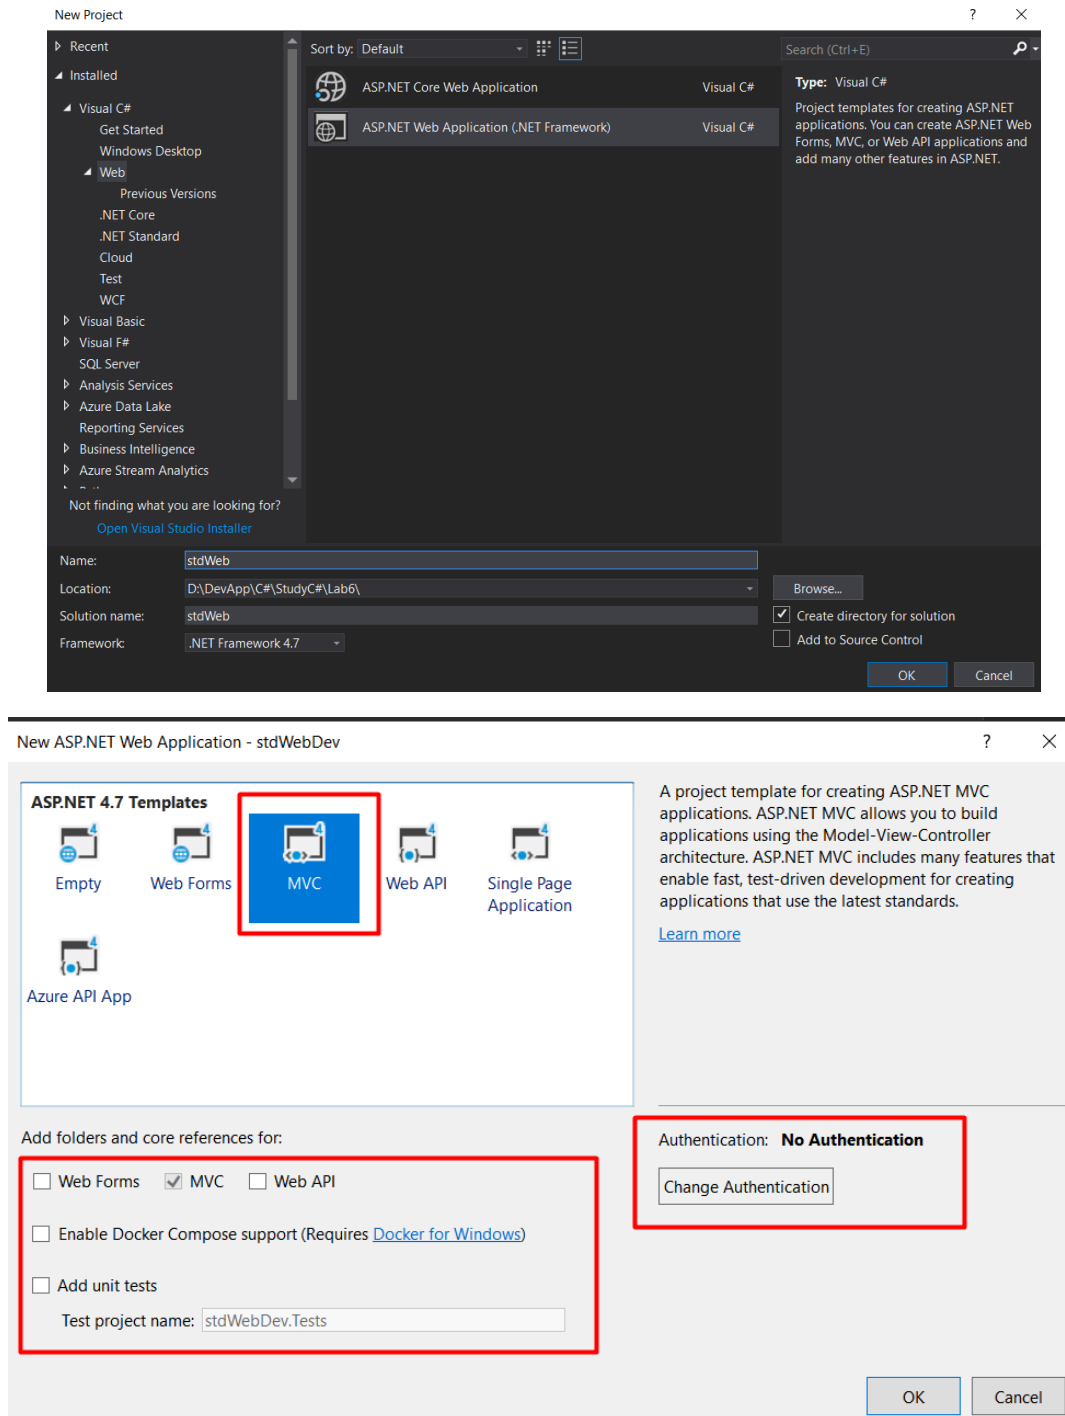

Webform Homework: Create a menu tab for Students integrated to your MVC project

Part 2: Create a MVC Web Project to create a web page **to add/delete/edit student** like WinForm

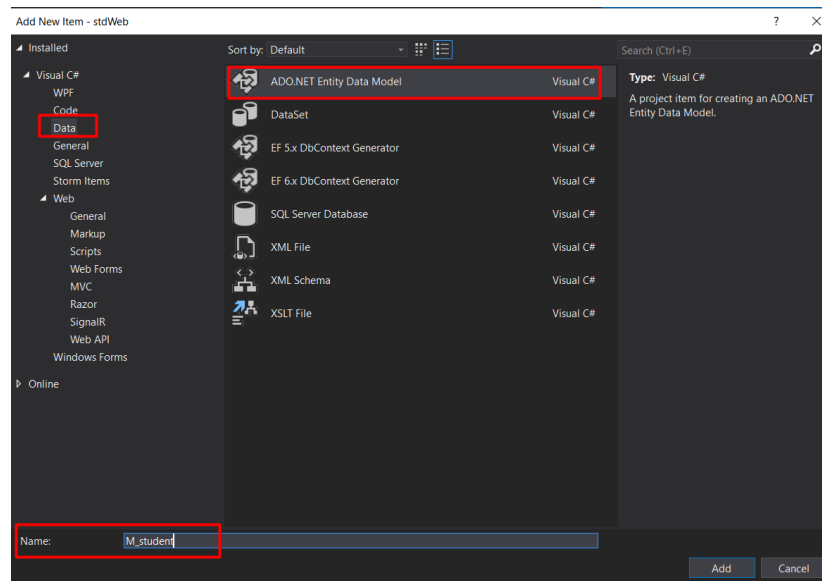

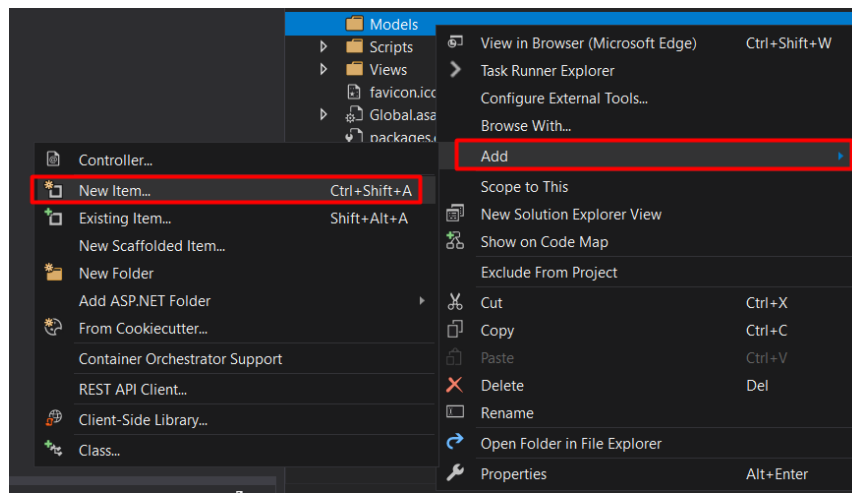

Use One-Many Database on Lab3, now use MVC to create Web-Form to manage Department, Dependence and Employee

Here is how you create a MVC with Data Entity Framework. Video: https://youtu.be/GS_Ra0-ZKQY

Below is step-by-step how to create Web MVC (.Net Framework)

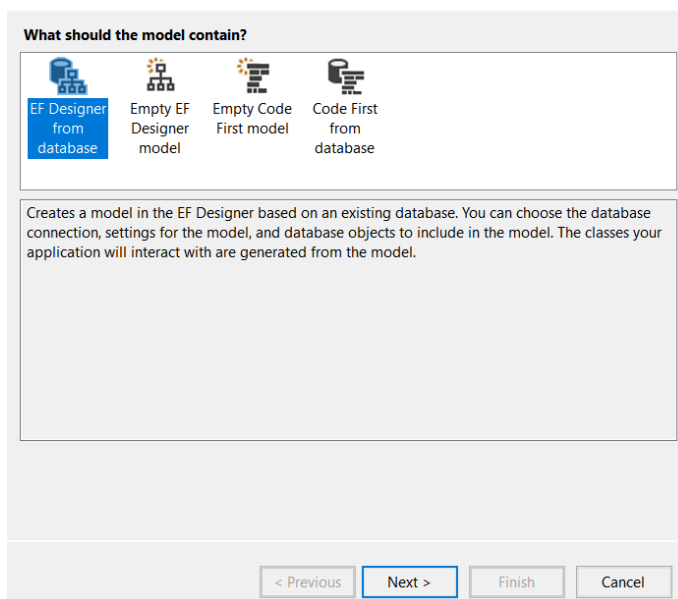

Create model

Entity Data Model Wizard

Choose Model Contents

Enter information to connect to the selected data source or click "Change" to choose a different data source and/or provider.

Data source:

Microsoft SQL Server (SqlClient)

Change...

Server name:

DELL-L5480-LT\SQL2017

Refresh

Log on to the server

Authentication:

Windows Authentication

User name: sa

Password:

SQL Authentication Mode

☐ Save my password

Connect to a database

☒ Select or enter a database name:

DB_Test

☐ Attach a database file:

Browse...

Logical name:

Advanced...

Test Connection

OK

Cancel

Choose Your Database Objects and Settings

Which database objects do you want to include in your model?

☒ Tables

☒ dbo

☒ student

☒ tbl_BookInfo

☐ tbl_Users

☐ tblMenuList

☐ Views

☐ Stored Procedures and Functions

☒ Pluralize or singularize generated object names

☒ Include foreign key columns in the model

☐ Import selected stored procedures and functions into the entity model

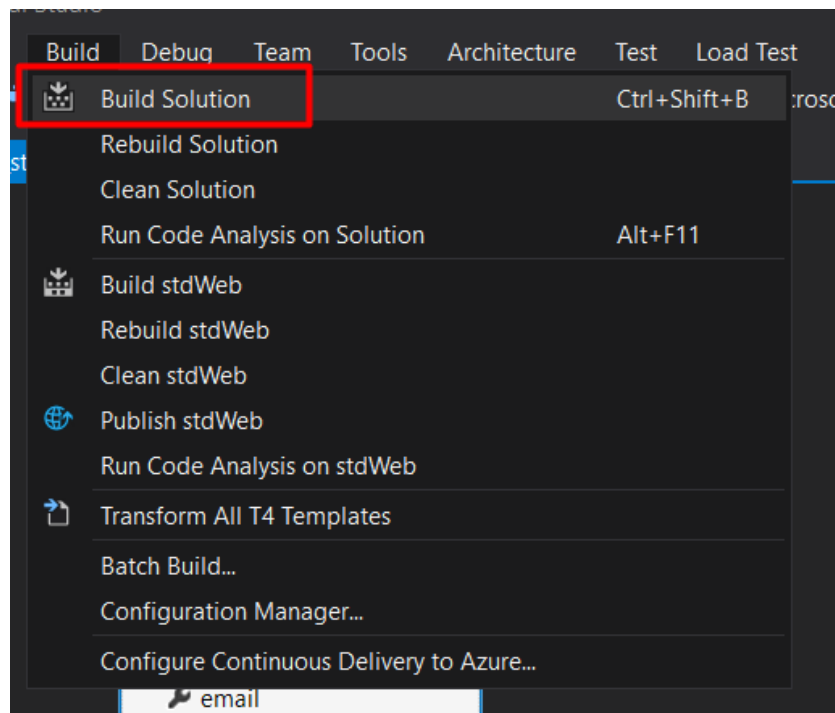

Model Namespace:

DB_TestModel

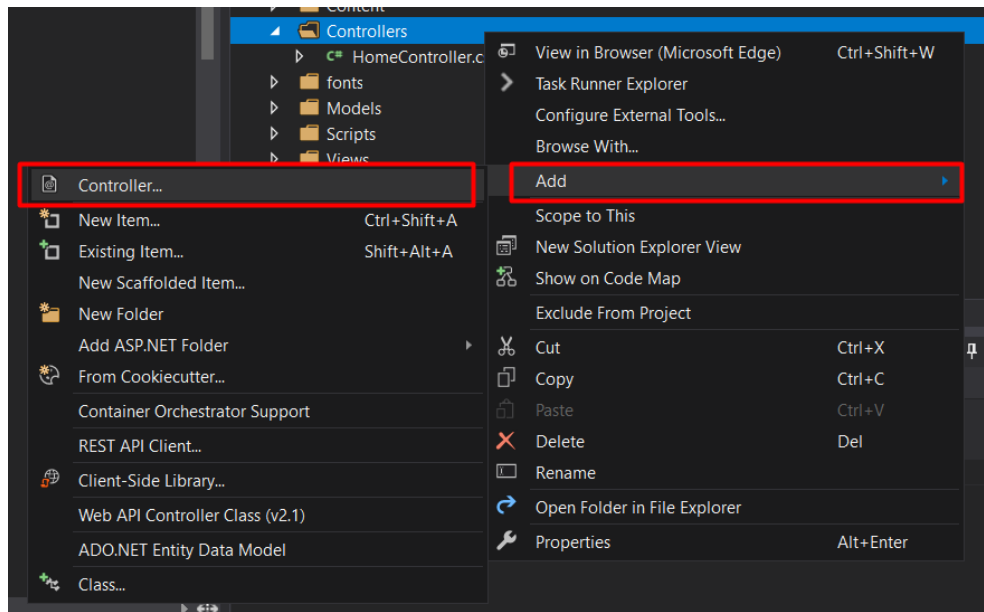

< Previous Next > Finish Cancel

Select data tables

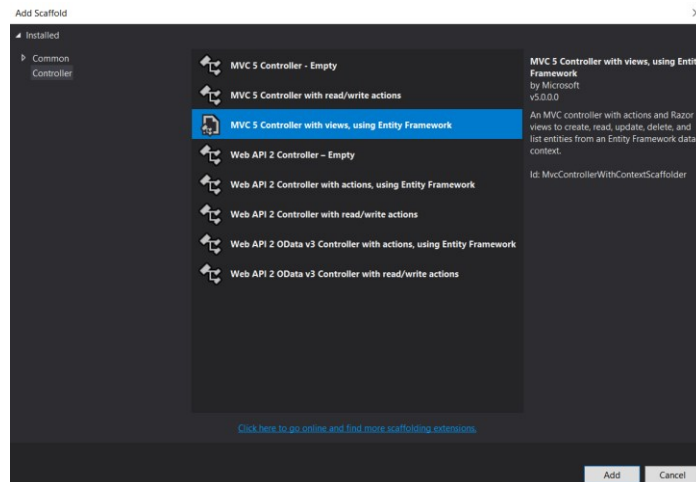

After creating Model, need to Build Solution

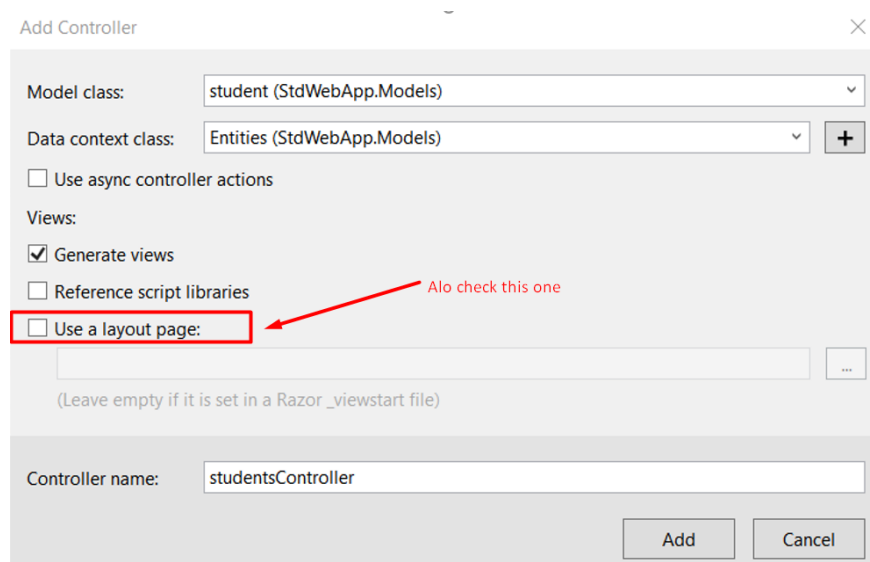

After building models, then add **controller**:

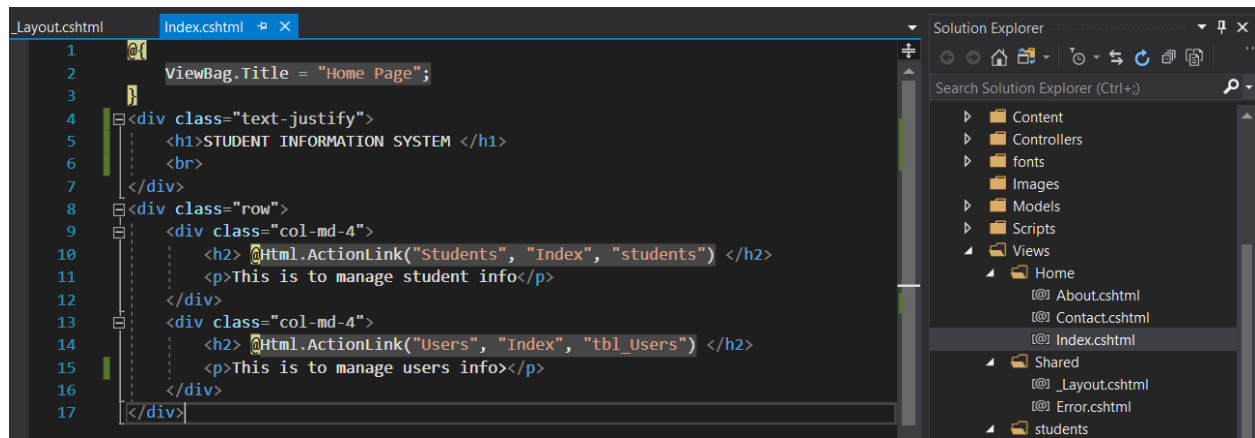

Add MVC 5 Controller with views, using Entity Framework as follow:

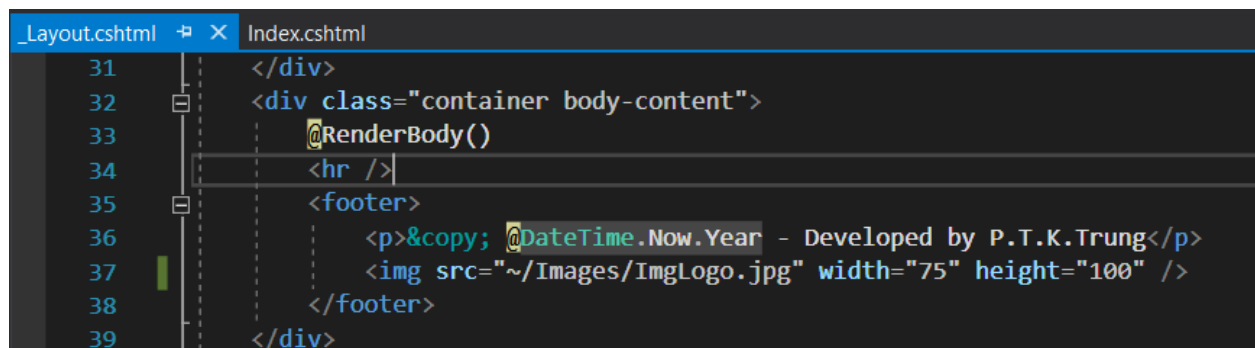

With choice as picture, will add Controller with View.

Open Index.cshtml to modify and link to student view.

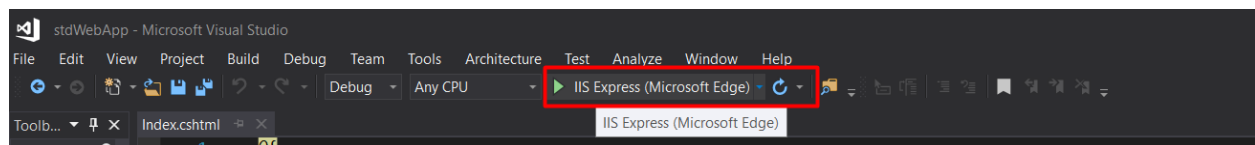

```
1
2 ViewBag.Title = "Home Page";
3
4 <div class="text-justify">
5   <h1>STUDENT INFORMATION SYSTEM </h1>
6   <br>
7 </div>
8 <div class="row">
9   <div class="col-md-4">
10    <h2> @Html.ActionLink("Students", "Index", "students") </h2>
11    <p>This is to manage student info</p>
12  </div>
13  <div class="col-md-4">
14    <h2> @Html.ActionLink("Users", "Index", "tbl_Users") </h2>
15    <p>This is to manage users info</p>
16  </div>
17 </div>
```

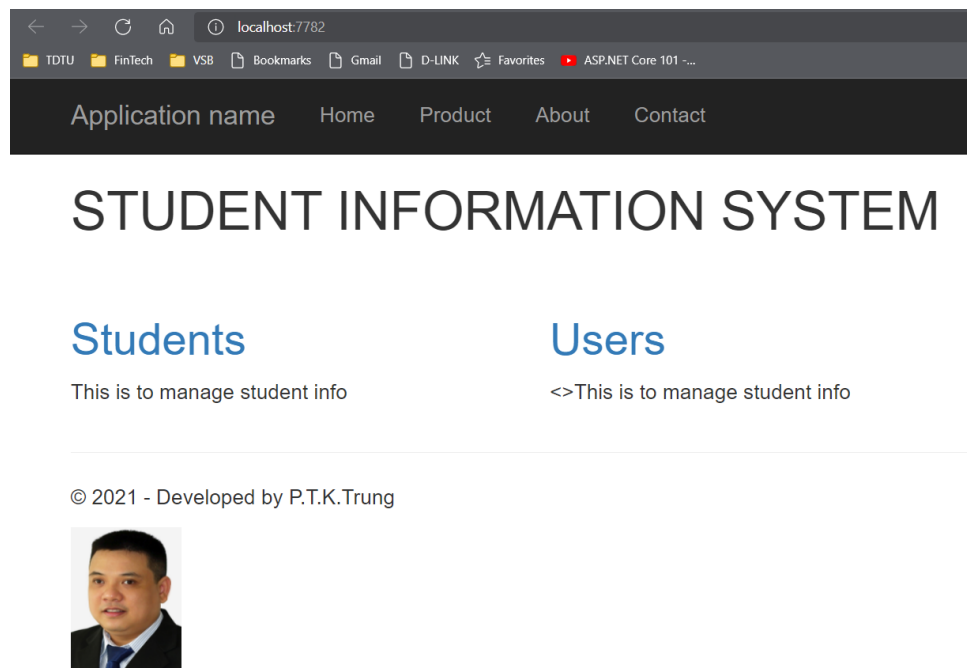

```
31 </div>
32 <div class="container body-content">
33   @RenderBody()
34   <hr />
35   <footer>
36     <p>&copy; @DateTime.Now.Year - Developed by P.T.K.Trung</p>
37     
38   </footer>
39 </div>
```

Finally, run a project on web browser

Output on Web Browser:

Click on Students:

localhost:7782/students

Application name Home Product About Contact
